ANTHONY NOLAN

Saving lives through stem cells

Anthony Nolans
Carbon Reduction Plan

Supplier Name: Anthony Nolan
Publication date: 20th July 2026

Baseline Emissions Footprint

Anthony Nolan is committed to achieving Net Zero emissions by 2040 for emissions scopes 1 & 2 and 2050 for emissions scope 3. To achieve this, we have created a strategy and committed to reducing our carbon on average by 7% annually between now and 2030. We aim to become an environmentally responsible charity that will reduce the longer-term environmental impact of its operations and act on the short-term wins. As a charity, we understand that we have a duty to earn and maintain the trust of our supporters and partners, by ensuring that what we do maximises positive outcomes and minimises adverse impacts. We will embrace our environmental impact reduction responsibilities whilst ensuing that any action we take is financially viable, ensuring we do not dilute our ability to support and care for our beneficiaries.

Anthony Nolan has different baseline carbon footprint years for scopes 1 & 2 and scope 3 (see below). This is because we only started reporting upon our scope 3 in the financial year 2023-24 and collecting data from the original baseline year 2020-21 is complex and requires data that is not available.

Baseline Year: 2020-21	
This is our Scope 1 & 2 baseline year. These scopes have a net zero goal of 2040.	
Baseline year emissions:	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 1	71
Scope 2	157
Total Emissions	228

Baseline Year: 2023-24	
This scope has a net zero goal of 2050 and includes the following categories: • Cat 1 - Purchased Goods and Services • Cat 2 - Capital Goods • Cat 3 - Fuel and energy related activities • Cat 4 - Upstream Transportation & Distribution • Cat 5 - Waste • Cat 6 - Business Travel • Cat 7 - Employee Commuting • Cat 12 - End of Life Treatment of sold products • Cat 15 - Investment & pensions (Accurate data is collected from courier companies and travel providers. Other categories use spend based emission factors to provide data. A full breakdown of the methodology is available in the FY 25-26 Environmental Sustainability Report.)	
Baseline year emissions:	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 3	6,153

Current Emissions Reporting

Reporting Year: 2025-26	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 1	**62**
Scope 2	**101**
Scope 3	**6,115**
Total Emissions	**6,278**

Emissions reduction targets

We have adopted the following carbon reduction targets to enable us to deliver our Net Zero goals. We aim to reduce our greenhouse gas emissions by 7% average annually between 2025-2030. This is proving quite complex; however, some properties are already seeing a reduction in scope 1 & 2 emissions. Our current work has been to improve data and ensure we are fully reporting scope 3. This will allow us to understand where we should be focusing our activity and spend. Our purchased goods and services emit the most carbon emissions, which also comes with significant uncertainty, so it can be difficult to deliver change. However, while we improve data information, we can and are delivering programmes which shift charity culture towards more sustainable procurement,

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the baseline years. The carbon emission reduction achieved by these schemes in scope 1 & 2 equate to 61 tCO2e, a 26.8% reduction against the 2020-21 baseline.

- Electrification of our fleet.
- Implementation of LEDs across our properties.
- Improving the efficiency of our heating and cooling through replacing existing capital goods and behaviour change.

Other Carbon reduction projects include:

- Our laptop programme has changed to recycle them or where possible they are bought back by Dell for repurposing.
- Increased recycling schemes at major sites and changes to processes to reduce single use plastics.
- During our brand refresh we reviewed physical items and shifted to more sustainable options where possible.
- We migrated our servers to the cloud.

In the future we hope to implement further measures such as:

- Sustainable aviation fuel to reduce the impact of life saving flights and courier trips to deliver stem cells.
- Embedding sustainability in the procurement processes.
- Move away from gas boilers in our properties.
- Invest in measures to increase the UK-to-UK market for transplants.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[1] and uses the appropriate **Government emission conversion factors for greenhouse gas company reporting**[2]. Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published

[1] **https://ghgprotocol.org/corporate-standard**

[2] **https://www.gov.uk/government/collections/government-conversion-factors-for-company-reporting**

reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard[3].

This Carbon Reduction Plan has been reviewed and signed off by the Board of Trustees as part of the statutory Annual Report 2026.

Signed on behalf of the Supplier:
